

The Through Line

One-Line Claim

From raw customer data to a ranked contact list, done- no back-and-forth required.

Content Map

Page: Home

Order	Section
1	One-line claim
2	CTA button: "Message me on LinkedIn"

Nothing else. The claim and the button carry the page — no proof line, no preview, so the CTA has no competition.

Page: Cases

Order	Section	Case	Notes
1	Churn Risk — Weekly Contact List	Churn case (three beats)	Only fully framed case right now — leads because it's the strongest and only real one
2	CTA	—	"Message me on LinkedIn"

Page: About / Contact

Order	Section
1	Bio
2	Skills: Power BI, Python (pandas), Excel, SQL, Matplotlib, NumPy, Git, GitHub
3	Contact line: "If this is the problem on your plate, message me on LinkedIn — let's talk."

Every page ladders to the same one action: message on LinkedIn to start the hiring conversation.

Still Need to Gather

Already have (just need to be placed in the build):

- GitHub repo link for the churn project (code, scoring script)
- Live published link to the Power BI dashboard
- Dashboard screenshot (already captured)
- Weekly contact list view (already built)
- Ranked contact list CSV (already built)

Genuinely missing:

- No testimonial or endorsement exists yet.
- Retail sales analysis and e-commerce analysis are not yet interviewed or framed as three-beat cases — right now they're toy-dataset exercises, not portfolio cases. They need the same honest interview the churn project got before they can go on the Cases page.

This list is honest on purpose — the Cases page can ship with one strong case now; the other two get added once they've earned a real case the same way churn did.
