Image Set — Final Keepers

Real captures

1. **Power BI dashboard screenshot:** Cases page, churn case, beat 2 ("what I did and decided"). Real capture, not a stand-in.

2. **Weekly contact-list view:** Cases page, churn case, beat 3 ("what came of it")—built directly from real scored data.

Generated (connective tissue only)

1. **Three-beat icons:** small geometric markers for Problem / Decision / Result, used only as structural wayfinding on the Cases page. Ink-only, matching the kit — no accent colour, since these mark structure, not urgency.

Problem

Decision

Result

Logo

2. **"AF" monogram** : already built, used site-wide.

Real photo

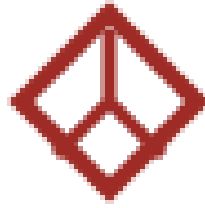

No photo used anywhere on the site. The only page where "the subject is a person" could apply is About/Contact, and that page was deliberately kept text-only — bio, skills, contact line. If a headshot gets added later, it must be a real photo, not generated.

Rejection Note

Rejected: an alternate version of the three-beat icons using the red accent colour (#9E2B25) on all three icon strokes instead of ink.

Problem

Decision

Result

Why: the style note is explicit that the accent is reserved only for urgency — risk flags and the CTA button, nothing else. Using it decoratively on structural icons that just mark "problem/decision/result" breaks that rule and quietly trains the reader to stop reading red as "act now." The whole point of a one-accent-colour system is that it stays rare enough to mean something. Making it decorative anywhere is the fastest way to make it meaningless everywhere. The ink-only version does the same wayfinding job without spending the one signal colour on something that isn't urgent.

Where Real Beat Generated

Need	Choice	Why
Dashboard + contact-list visuals	Real capture	These <i>are</i> the proof — a generated stand-in would be fabricating results that don't exist
Three-beat markers	Generated (vector)	Purely structural, no claim being made, safe to generate as long as style stays consistent with the kit
Any personal photo	Real, if used at all	A generated "person" would misrepresent who's behind the work — currently unused; About stays text-only
